

## **The Complete Utility Suite for a Cleaner, Faster & More Stable PC**

Every time you use Windows or install new software your PC adds entries to your registry (the database managing your PC's configuration). If you don't have the tools to cleanse your registry of unwanted and obsolete entries they can fragment, slow down your system and even cause it to crash.

Jv16 PowerTools is the complete utility suite for keeping your PC clean and running smoothly. Our registry cleaner software scans for errors and obsolete data, and then runs repairs to ensure your system is running at peak performance.

We were behind one of the first ever registry cleaner applications in the world, released in 1998. From our years of experience, we ensure our software provides the most intelligent and efficient analysis on the market: cleaning your registry in seconds, not minutes.

The jv16 PowerTools suite includes a registry manager, software uninstaller and dozens of other features unavailable in other packages. Our suite provides the tools to backup your registry, speed up your PC's startup and even protect your privacy from unwanted cookies when you're surfing the web.

Jv16 PowerTools has been featured in PC Mag, Information Week and PC Welt for its performance and reliability.

Our multilingual software is simple to install, easy to use, affordable and can be upgraded to the latest version at no additional cost. Jv16 PowerTools is the optimum software suite for ensuring your PC has a cleaner, faster system that is totally error free.
